Triodos Euro Bond Impact Fund aims to generate positive impact and stable income from a concentrated portfolio of investment-grade, euro-denominated bonds issued by listed companies, and semi-public institutions and EU member state governments.

We select companies for their contribution to our seven sustainable transition themes. Through integrated financial and sustainability analysis we identify the drivers of a company's long-term value creation and assess the impact of ESG materiality on these drivers. Additionally, the companies we invest in must comply with the Triodos strict minimum standards. This product is not without risks. Please see the prospectus and the KID for more detail.

Highlights

- Triodos Euro Bond Impact Fund generated a return (after costs) of -0.26%, while the benchmark yielded -0.01%.
- Bond markets pared back on rate cut expectations after hawkish central bank statements. This resulted in higher interest rates over the month. Meanwhile, the eurozone economy has stagnated while inflation is gradually falling towards the central bank's target. We therefore expect the ECB to start cutting policy rates in the first half of this year. Corporate bonds outperformed sovereign bonds on stable risk spreads, with lower-rated names and Financials outperforming the broader investment grade market. Spreads on periphery sovereign bonds tightened.
- The fund had a negative performance, trailing its reference index over the month (gross of costs). The allocation effect was positive, resulting from our underweight position in sovereign bonds and overweight in government-related bonds. Our overweight duration stance resulted in a negative curve change effect. The selection effect was negative, resulting from our defensive positioning with an overweight in higher-quality names.
